## ENGINEERING MECHANICS

Course Weekly Outline :

| Week | Topics Covered |
| :---: | :---: |
| 1 | Definition of mechanics ,force and trigonometric ratios |
| 2 | Analysis of forces |
| 3 | Triangle force and parallelogram laws |
| 4 | Moment of forces |
| 5 | Couples |
| 6 | Resultant of concurrent forces |
| 7 | Resultant of non concurrent forces |
| 8 | Distributed loads |
| 9 | Equilibrium in concurrent forces |
| 10 | Equilibrium in non concurrent forces |
| 11 | Types of beams and supports |
| 12 | Analysis of trusses by method of joints |
| 13 | Analysis of trusses by method of sections |
| 14 | Friction ,friction theory |
| 15 | Laws of friction ,types of friction ,applications |
| 16 | Centroids of simple shapes |
| 17 | Centroids of complex shapes |
| 18 | Moment of inertia for the simple shapes |

| Week | Topics Covered |
| :---: | :--- |
| 19 | Moment of inertia for the complex shapes |
| 20 | Applications |
| 21 | Strength of materials ,definition of stress ,types of stresses factor of safety |
| 22 | Strain ,hook's law |
| 23 | Lateral strain ,poison's ratio ,applications |
| 24 | Shear force and bending moment diagrams |
| 25 | Applications |
| 26 | Bending stress for beams |
| 27 | Shear stress for beams, Applications |
| 28 | Beams which making from two materials |
| 29 | Reinforced concrete beams |
| 30 | Applications |

## 1/ Over view

## 1/A -Target population :-

For students of first class
Technical institute
Department of Civil Techniques

## 1/B -Rationale :-

Mechanics is very important subject to be studied in order to have a full knowledge about the portions of mechanics classifications of forces and trigonometric ratios of angles, for this reason I have designed this modular unit for this knowledge to be understood .

## 1 / C -Central Idea :-

1 -Definition of mechanics
2 -The portions of mechanics
3 -Definition of force
4 -Classification of forces
5 -Trigonometric ratios of angles

## 1 / D -Instructions:-

1-Study over view thoroughly.
2-Identify the goal of this modular unit .
3-Do the pre test and if you :-

- get 9 or more you do not need to proceed.
- get less than 9 you have to study this modular unit well .

4-After studying the text of this modular unit ,do the post test, and if you :-

- get 9 or more, so go on studying second modular unit .
- get less than 9 , go back and study the first modular unit ; or any part of it ; again and then do the post test again .

## 2/Performance Objectives :-

After studying the first modutar unit , the student will be able to:-
1-Define the mechanics and its portions.
2-Define the force and its classifications.
3-Determine the trigonometric ratios for angles .

1-Define the force .
2 -Write the values of $\left(\operatorname{Sin} 30^{\circ}, \operatorname{Sin} 45^{\circ}, \operatorname{Cos} 60^{\circ}\right)$.

Mechanics: is that branch of physical sciences which describes the motion of bodies with rest being considered a special case of motion .

Mechanics of rigid bodies: is divided into tow portions:
1-Statics:deals with bodies at rest
2-Dynamics:deals with bodies in motion
Physical Quantities :is classified to:
1-Scalar quantities :have only magnitude(mass ,volume)
2-Vector quantities :have both magnitude and direction(couple ,force)

FORCE :any action which change or try to change the shape, volume or the motion of a body .

Classification of forces :
1-Collinear

2-Parallelforces

3-Concurrent forces

4-Non parallel , non concurrent forces

Right angle triangle:

$$
\begin{array}{ll}
\operatorname{Sin} \alpha=\mathrm{BC} / \mathrm{AC} & \rightarrow \mathrm{BC}=\mathrm{AC} \operatorname{Sin} \alpha \\
\operatorname{Cos} \alpha=\mathrm{AB} / \mathrm{AC} & \rightarrow \mathrm{AB}=\mathrm{AC} \operatorname{Cos} \alpha \\
\text { Tan } \alpha=\mathrm{BC} / \mathrm{AB}
\end{array}
$$

$$
(\mathrm{AC})^{2}=(\mathrm{AB})^{2}+(\mathrm{BC})^{2}
$$

1-Define the vector quantities
2-Classify the physical quantities

## 1- Pre test :-

1- As in text
$2-\operatorname{Sin} 30=0.5, \operatorname{Sin} 45=0.707, \operatorname{Cos} 60=0.5$

## 2- Post test :-

1- As in text
2- As in text

1-Singer , Ferdinand L. ,1975
Engineering Mechanics, $3^{\text {rd }}$ edition ,New York,Harper and Row publisher
2-Higdon Archie and William B. 1968
Engineering Mechanics $3^{\text {rd }}$ edition, United States, prentice -Hall

## 1/ Over view

## 1/A -Target population :-

For students of first class
Technical institute
Department of Civil Techniques

## 1/B -Rationale :-

Analysis of forces is very important subject to be studied in order to have a full knowledge about the principles of determination of components for the forces, for this reason I have designed this modular unit for this knowledge to be understood .

## 1/C-Central Idea:-

1 -Determination of the horizontal and vertical components of forces
2 -Examples

## 1 / D -Instructions:-

1-Study over view thoroughly.
2-Identify the goal of this modular unit .
3-Do the pre test and if you :-

- get 9 or more you do not need to proceed.
- get less than 9 you have to study this modular unit well .

4-After studying the text of this modular unit ,do the post test, and if you :-

- get 9 or more , so go on studying third modular unit .
- get less than 9 , go back and study the second modular unit ; or any part of it ; again and then do the post test again .

## 2/Performance Objectives :-

After studying the second medular unit , the student will be able to:-
1.Determine horizontal and vertical components of forces

1-Define mechanics.
2-what are the types of forces .

## 4/ the text :-

Example: Resolve the ( 1000 N ) force shown in figure into two Perpendicular components .

1000 N
Solution:
$\operatorname{Sin} 30=\mathrm{Q} / 1000 \rightarrow \mathrm{Q}=500 \mathrm{~N}$
$\operatorname{Cos} 30=\mathrm{P} / 1000 \rightarrow \mathrm{P}=866 \mathrm{~N}$

Example: Resolve the ( 390 N ) force shown in figure into two Perpendicular components .

## Solution:

$$
5 / 13=\mathrm{Q} / 390 \rightarrow \mathrm{Q}=150 \mathrm{~N}
$$

$$
12 / 13=\mathrm{P} / 390 \rightarrow \mathrm{P}=360 \mathrm{~N}
$$

Example: Resolve the ( 600 N )force shown in figure into two components one of them perpendicular on the inclined surface and the another parallel to it .

## Solution:

$\operatorname{Sin} \Theta=P / 600$
$3 / 5=\mathrm{P} / 600 \rightarrow \mathrm{P}=360 \mathrm{~N}$
$\operatorname{Cos} \Theta=\mathrm{Q} / 600$
$4 / 5=\mathrm{Q} / 600 \rightarrow \mathrm{Q}=480 \mathrm{~N}$

## 5/ Post test :-

1-Resolve the (100N) into two perpendicular components as shown in figure .

100N

P

## 6/ key answer :-

## 1- Pre test :-

1- As in text
2- As in text

## 2- Post test :-

$1-\mathrm{P}=50 \mathrm{~N}, \mathrm{Q}=86.6 \mathrm{~N}$

1-Singer , Ferdinand L. , 1975
Engineering Mechanics , $3^{\text {rd }}$ edition ,New York ,Harper and Row publisher
2-Higdon Archie and William B. 1968
Engineering Mechanics $3^{\text {rd }}$ edition, United States, prentice -Hall

## 1/ Over view

## $1 /$ A -Target population :-

For students of first class
Technical institute
Department of Civil Techniques

## 1/B-Rationale :-

Parallelogram laws are very important subject to be studied in order to have a full knowledge about the principles of determination of non perpendicular components for the forces, for this reason I have designed this modular unit for this knowledge to be understood

## 1/C-Central Idea :-

1-Determination of non perpendicular components of forces
2-Examples on Sin and Cos laws

## 1/D -Instructions:-

1-Study over view thoroughly.
2-Identify the goal of this modular unit .
3-Do the pre test and if you :-

- get 9 or more you do not need to proceed .
- get less than 9 you have to study this modular unit well .

4-After studying the text of this modular unit ,do the post test, and if you :-

- get 9 or more, so go on studying fourth modular unit .
- get less than 9 , go back and study the third modular unit ; or any part of it ; again and then do the post test again .

## 2/Performance Objectives :-

After studying the third modular unit , the student will be able to:-
1.Determine the non perpendicular components of forces
2.Use the Sin and Cos laws

1-Resolve the ( 390 N ) force shown in figure into two
Perpendicular components .
500 N

Cos. Law:

$$
\mathrm{R}^{2}=\mathrm{P}^{2}+\mathrm{Q}^{2}-2 \mathrm{PQ} \operatorname{Cos}(180-\Theta-\alpha)
$$

Sin. Law:

$\mathrm{R} / \operatorname{Sin}(180-\theta-\alpha)=\mathrm{Q} / \operatorname{Sin} \Theta=\mathrm{P} / \operatorname{Sin} \alpha$

Example : Resolve the (300N) force into two components as shown in figure .

## Solution:

$180-45-25=110^{\circ}$

P
$300 / \operatorname{Sin} 110=P / \operatorname{Sin} 45 \rightarrow P=225.7 N$
$300 / \operatorname{Sin} 110=\mathrm{Q} / \operatorname{Sin} 25 \rightarrow \mathrm{Q}=134.69 \mathrm{~N}$

Example: Determine the magnitude of resultant for the two forces shown in figure .

Solution:

$$
\begin{aligned}
\mathrm{R}^{2} & =\mathrm{P}^{2}+\mathrm{Q}^{2}-2 \mathrm{PQ} \operatorname{Cos}(180-\Theta-\alpha) \\
& =(8)^{2}+(5)^{2}-2 * 8 * 5 * \operatorname{Cos}(129) \\
& =139.34 \\
\mathrm{R} & =11.8 \mathrm{~N}
\end{aligned}
$$

1-Resolve the (150N)force into two components as shown in figure .

## 6/ key answer :-

## 1- Pre test :-

$$
1-\mathrm{Fx}=461.53 \mathrm{~N}, \mathrm{Fy}=192.3 \mathrm{~N}
$$

## 2- Post test :-

$1-\mathrm{P}=57.57 \mathrm{~N}, \mathrm{Q}=114.81 \mathrm{~N}$

1-Singer , Ferdinand L. ,1975
Engineering Mechanics , $3^{\text {rd }}$ edition ,New York ,Harper and Row publisher
2-Higdon Archie and William B. 1968
Engineering Mechanics $3^{\text {rd }}$ edition, United States, prentice -Hall

## 1/ Over view

## 1 / A -Target population :-

For students of first class
Technical institute
Department of Civil Techniques

## 1/B -Rationale :-

Moment of forces is very important subject to be studied in order to have a full knowledge about determination of the moments for the forces about any point or axis, for this reason I have designed this modular unit for this knowledge to be understood .

## 1 / C -Central Idea :-

1-Determination of moments when the perpendicular distance is known
2-Determination of moments by using Varignan's theory .

## 1 / D -Instructions:-

1-Study over view thoroughly.
2-Identify the goal of this modular unit .
3-Do the pre test and if you :-

- get 9 or more you do not need to proceed .
- get less than 9 you have to study this modular unit well .

4-After studying the text of this modular unit ,do the post test, and if you :-

- get 9 or more, so go on studying fifth modular unit.
- get less than 9 , go back and study the fourth modular unit ; or any part of it ; again and then do the post test again .

## 2/ Performance Objectives :-

After studying the fourth modular unit , the student will be able to:-
1.Determine the moments of forces
2.Use Varignan's theory .

1-Determine the magnitude of resultant for the two forces shown in figure.

Moment Of Forces: is a measure to its tendency to turn a force about a point or axis
Mathematical expression of moment:

$$
\mathrm{Ma}=\mathrm{F} . \mathrm{d}
$$

a
$\mathrm{F}=$ the magnitude of force.
and the point.

## Direction of Moment:

Clock wise $\quad \rightarrow$ -
Counter clockwise $\&+$
Units of Moment: N.cm, N.m , Kn.m, Ib.in .
Varignan's Theory: the moment of a force about any point or axis is equal to the vector sum the moments of its components about the same point or axis

Example: Determine the moment of the (100N) force shown in figure about the axis through Point A.

## Solution:

$$
\begin{aligned}
+\mathrm{Ma} & =\mathrm{F} \cdot \mathrm{~d} \\
& =-100 \times 50=-5000 \mathrm{~N} . \mathrm{cm} \\
& =5000 \mathrm{~N} . \mathrm{cm}
\end{aligned}
$$

Example: Determine the moment of the (130N) force shown in figure about the axis through Point A.

Solution:

$$
\begin{gathered}
\mathrm{Fx}=130 \times 12 / 13=120 \mathrm{~N} \\
\mathrm{Fy}=130 \times 5 / 13=50 \mathrm{~N} \\
\mathrm{X}=100 \times 4 / 5=80 \mathrm{Cm} \\
\mathrm{Y}=100 \times 3 / 5=60 \mathrm{Cm} \\
\mathrm{MA}=-120 \times 60-50 \times 80=-11200 \mathrm{~N} . \mathrm{Cm} \\
=11200 \mathrm{~N} . \mathrm{Cm}
\end{gathered}
$$

A

## 5/ Post test :-

1-Determine the moment of the ( 150 N ) force shown

## 1- Pre test :-

$1-\mathrm{R}=11.02 \mathrm{~N}$

## 2- Post test :-

$1-\mathrm{M}=6000 \mathrm{~N} . \mathrm{cm}$

1-Singer , Ferdinand L. ,1975
Engineering Mechanics, $3^{\text {rd }}$ edition ,New York ,Harper and Row publisher
2-Higdon Archie and William B. 1968
Engineering Mechanics $3^{\text {rd }}$ edition, United States, prentice -Hall

## 1/Over view

## $1 /$ A -Target population :-

For students of first class
Technical institute
Department of Civil Techniques

## 1/B -Rationale :-

Couples are very important subject to be studied in order to have a full knowledge about determination of the moments for the forces which have parallel line of action and opposite senses for this reason I have designed this modular unit for this knowledge to be understood.

## 1 / C -Central Idea :-

1-Determination of moments the forces which have parallel line of action and opposite senses .

2-Resolution of a force into a force and a couple .

## 1 / D -Instructions:-

1-Study over view thoroughly.
2-Identify the goal of this modular unit .
3-Do the pre test and if you :-

- get 9 or more you do not need to proceed.
- get less than 9 you have to study this modular unit well .

4-After studying the text of this modular unit ,do the post test, and if you :-

- get 9 or more, so go on studying sixth modular unit .
- get less than 9 , go back and study the fifth modular unit ; or any part of it ; again and then do the post test again .

## 2/Performance Objectives:-

After studying the fifth modular unit , the student will be able to:-

1. Determine the moments of forces which have parallel line of action and opposite senses
2.Resolution of a force into a force and a couple

## 3/ Pre test :-

## 1-Define the moment

2-What are the units of moment

Coupls:
A couple cosists of two equal forces which have parallel line of actions and apposite Senses and work on turn the body .
Moment of a couple: Mc

$$
\mathrm{Mc}=\mathrm{F} . \mathrm{d}
$$

Mc:the sum of the moments of the forces .

$\mathrm{d}:$ the perpendicular distance between the forces .

Transformation of a couple:
80N

$+e \mathrm{Mc}=-100 \times 4=-400 \mathrm{~N} . \mathrm{Cm}$
NOTE: the moment of a couple about any point is equal .
Example: Determine the moment of the couple shown in figure about the axis through Points A,B,D .

## Solution:

$+Q_{\mathrm{Mc}(\mathrm{A})=1000 \times 40+1000 \times 40=80000 \mathrm{~N} . \mathrm{Cm} .40}$
$+\& \operatorname{Mc}(B)=1000 \times(40+40)=80000 \mathrm{~N} . \mathrm{Cm}$
$+e_{e} \operatorname{Mc}(\mathrm{D})=1000 \times(40+40+50)-1000 \times 50=80000 \mathrm{~N} . \mathrm{Cm}$

NOTE: two or more couples may be replaced by a single couple have the same magnitude and direction of moment results by the summation of moments of the original couples .

Example: Replace the following couples shown in figure by a single couple its forces effects horizontally at points B,D .
Solution:
$+\& \mathrm{Mc}=-200 \times 20+100 \times 30+50 \times 40$
$=1000 \mathrm{~N} . \mathrm{Cm}$
$\mathrm{Mc}=\mathrm{F} . \mathrm{d}$
$1000=\mathrm{F} \times 20$
20 Cm
$\mathrm{F}=50 \mathrm{~N}$

50N
Resolution of a force into a force and a couple:
A force can be replaced by a parallel force at any different point and a couple by addition of two equal collinear forces of opposite senses to the force system.

Example: Replace the(70N)force shown in figure by a force which acts at point A and a couple whose forces act vertically at points B,D .

## Solution:

70N

+ Mc=70×60=4200N.Cm
$\mathrm{Mc}=\mathrm{F} . \mathrm{d}$
$4200=\mathrm{F} \times 42$

$\mathrm{F}=100 \mathrm{~N}$

1-Determine the moment of a couple consists of tow equal forces have parallel line of action and opposite senses the magnitude of each one is ( 75 N ) and the distance between them is $(35 \mathrm{~cm})$.

## 6/ key answer :-

## 1- Pre test:-

1-As in text
2-As in text

## 2- Post test :-

$1-\mathrm{M}=2625 \mathrm{~N} . \mathrm{cm}$

1-Singer , Ferdinand L. ,1975
Engineering Mechanics, $3^{\text {rd }}$ edition ,New York ,Harper and Row publisher
2-Higdon Archie and William B. 1968
Engineering Mechanics $3^{\text {rd }}$ edition, United States, prentice -Hall

## 1/ Over view

## 1 / A -Target population :-

For students of first class
Technical institute
Department of Civil Techniques

## 1/B -Rationale :-

Resultant is very important subject to be studied in order to have a full knowledge about determination of the resultant for the concurrent forces for this reason I have designed this modular unit for this knowledge to be understood .

## 1/C-Central Idea :-

1-Determination of resultant of concurrent forces

## 1 / D -Instructions:-

1-Study over view thoroughly.
2-Identify the goal of this modular unit .
3-Do the pre test and if you :-

- get 9 or more you do not need to proceed.
- get less than 9 you have to study this modular unit well .

4-After studying the text of this modular unit ,do the post test, and if you :-

- get 9 or more, so go on studying seventh modular unit .
- get less than 9 , go back and study the sixth modular unit ; or any part of it ; again and then do the post test again .

## 2/Performance Objectives:-

After studying the sixth modular unit , the student will be able to:-
1.Determine the resultant of concurrent forces

## 3/ Pre test :-

1- Determine the moment of the couple shown in figure about the axis through Points A,B,D .

## 4/ the text :-

Resultant: the resultant is the simplest force which can replace the original force system without changing its external effect on the body.
if $\mathrm{R}=0$ the body is in equilibrium .
if $\mathrm{R} \neq 0$ the body will be accelerated.
1 :Resultant of concurrent forces : expected resultant is a force .

Example: Determine the magnitude and direction of the resultant for the force system shown in figure .

## Solution:

$\nrightarrow \mathrm{Rx}=200 \times 2 / \sqrt{5}+90 \operatorname{Cos} 45-100 \operatorname{Cos} 60$

$$
\begin{aligned}
& =192.5 \mathrm{~N} \longrightarrow \\
+\uparrow & \rightarrow 200 \times 1 / \sqrt{5}-90 \operatorname{Sin} 45-100 \operatorname{Cos} 60 \\
& =-60.78 \mathrm{~N}=60.78 \mathrm{~N} \\
\mathrm{R} & =\sqrt{(\mathrm{Rx})^{2}+(\mathrm{Ry})^{2}} \\
\mathrm{R} & =\sqrt{(192.5)^{2}+(60.78)^{2}} \\
& =201.86 \mathrm{~N} \\
\Theta & =\operatorname{Tan}^{-1} \mathrm{Ry} / \mathrm{Rx} \\
& =17.5^{\circ}
\end{aligned}
$$

Example; Determine the magnitude of forces (P)and(Q),if the resultant is (200N)as shown in figure .

Substitute in equation 1

$$
160=\mathrm{Q}-0.5 \times 138.56
$$

$$
\mathrm{Q}=229.28 \mathrm{~N}
$$

$$
\begin{aligned}
& + \text { Solution: } \\
& \rightarrow \mathrm{Rx}=200 \times 4 / 5=160 \mathrm{~N} \\
& +\uparrow \mathrm{Ry}=-200 \times 3 / 5=-120 \mathrm{~N}=120 \mathrm{~N} \downarrow \\
& \mathrm{Rx}=\mathrm{Q}-\mathrm{P} \operatorname{Cos} 60 \\
& \text { 160=Q-0.5P ------ } 1 \\
& \text { Ry=-P Sin60 } \\
& -120=-\mathrm{P} \text { Sin60 } \\
& \mathrm{P}=138.56 \mathrm{~N}
\end{aligned}
$$

## 5/ Post test :-

1-Determine the magnitude and direction of the resultant for the force system shown in figure .

## 6/ key answer :-

## 1- Pre test :-

$1-\mathrm{MA}=\mathrm{MB}=\mathrm{MD} 30000 \mathrm{~N} . \mathrm{Cm}$

## 2- Post test :-

$1-\mathrm{R}=83.49 \mathrm{~N}, \Theta=32.35^{\circ}$

1-Singer , Ferdinand L. ,1975
Engineering Mechanics , $3^{\text {rd }}$ edition ,New York ,Harper and Row publisher
2-Higdon Archie and William B. 1968
Engineering Mechanics $3^{\text {rd }}$ edition, United States, prentice -Hall

## 1/ Over view

## 1/A -Target population :-

For students of first class
Technical institute
Department of Civil Techniques

## 1/B -Rationale :-

Resultant is very important subject to be studied in order to have a full knowledge about determination of the resultant for the non concurrent forces for this reason I have designed this modular unit for this knowledge to be understood .

## 1 / C -Central Idea :-

1 -Determination of resultant of non concurrent forces

## 1 / D -Instructions:-

1-Study over view thoroughly.
2-Identify the goal of this modular unit .
3-Do the pre test and if you :-

- get 9 or more you do not need to proceed.
- get less than 9 you have to study this modular unit well .

4-After studying the text of this modular unit ,do the post test, and if you :-

- get 9 or more, so go on studying eighth modular unit.
- get less than 9 , go back and study the seventh modular unit ; or any part of it ; again and then do the post test again .

## 2/Performance Objectives :-

After studying the seventh medular unit , the student will be able to:-
1.Determine the resultant of non concurrent forces

1- Determine the magnitude of forces $(\mathrm{P}) \operatorname{and}(\mathrm{Q})$, if the resultant is $(250 \mathrm{~N})$ as shown in figure .

2-Resultant of non concurrent , non parallel forces:
if $R \neq 0$ the resultant is a force
if $\mathrm{R}=0$ the resultant is a couple and $\mathrm{Mc}=\sum \mathrm{Mo}$

Example: Determine the resultant of the forces and the couple shown in figure and locate it with respect to point (A).

## Solution:

$$
\begin{align*}
&+\longrightarrow \mathrm{Rx}=250 \times 3 / 5-520 \times 12 / 13-400 \\
&=-730 \mathrm{~N}=730 \mathrm{~N} \\
& \hline
\end{align*}
$$

$$
R y=250 \times 4 / 5-520 \times 5 / 13=0
$$

$$
\mathrm{R}=730 \mathrm{~N} \longleftarrow
$$

$$
\begin{aligned}
& \mathrm{R} \times \mathrm{d}=\sum \mathrm{Ma} \\
& 730 \times \mathrm{d}=-250 \times 3 / 5 \times 30+400 \times 30 \\
& \quad-520 \times 5 / 13 \times 40+2700 \\
& \mathrm{~d}=3 \mathrm{Cm}
\end{aligned}
$$

3:Resultant of parallel force system:
If $R \neq 0$ then the resultant is a force
If $\mathrm{R}=0$ then the resultant is a couple and $\mathrm{Mc}=\sum \mathrm{Ma}$
Example: Determine the resultant of the parallel forces shown in figure, and its Location from point (a).
Solution:
$+\uparrow \mathrm{R}=\sum \mathrm{Fy}$

$$
=50+90-80-90=-30 \mathrm{~N}=30 \mathrm{~N}
$$

$+\& \mathrm{R} \times \mathrm{d}=\sum \mathrm{Ma}$

$$
\begin{aligned}
& -30 \times d=-800 \times 20+50 \times 50+90 \times 80-90 \times 100 \\
& d=30 \mathrm{Cm}
\end{aligned}
$$

$\begin{array}{llll}\mathrm{Cm} & \mathrm{Cm} & \mathrm{Cm} & \mathrm{Cm}\end{array}$

Example: Determine the resultant of the parallel forces shown in figure, and its Location from point (a).
Solution:
$+\mathrm{R}=\sum \mathrm{Fy}$

$$
=50+90-80-60=0
$$

The resultant may be a couple
$\Leftrightarrow \quad \mathrm{Mc}=\sum \mathrm{M}$

$$
=-80 \times 20+50 \times 50+90 \times 80-60 \times 100=2100 \mathrm{~N} . \mathrm{Cm}
$$

## 5/ Post test :-

1-Determine the resultant of the forces and the couple shown 250N in figure and locate it with respect to point (A).

## 1- Pre test :-

$1-\mathrm{P}=173.2 \mathrm{~N}, \mathrm{Q}=286.6 \mathrm{~N}$

## 2- Post test :-

$1-\mathrm{R}=750 \mathrm{~N}, \mathrm{~d}=3.8 \mathrm{~cm}$

## 7/Sources :-

Engineering Mechanics $3^{\text {rd }}$ edition, United States, prentice -Hall

## 1/ Over view

## 1 / A -Target population :-

For students of first class
Technical institute
Department of Civil Techniques

## 1/B -Rationale :-

Distributed loads is very important subject to be studied in order to have a full knowledge about determination of the resultant for the distributed load and its location for this reason I have designed this modular unit for this knowledge to be understood .

## 1 / C -Central Idea :-

1-Determination of resultant of distributed loads .
2- Determination of location of resultant of distributed loads .

## 1 / D -Instructions:-

1-Study over view thoroughly.
2-Identify the goal of this modular unit .
3-Do the pre test and if you :-

- get 9 or more you do not need to proceed.
- get less than 9 you have to study this modular unit well .

4-After studying the text of this modular unit ,do the post test, and if you :-

- get 9 or more, so go on studying ninth modular unit.
- get less than 9 , go back and study the eighth modular unit ; or any part of it ; again and then do the post test again .

## 2/ Performance Objectives :-

After studying the eighth modular unit , the student will be able to:-
1.Determine the resultant of distributed loads .
2.Determine the location of resultant of distributed loads .

## 3/ Pre test :-

1-Determine the resultant of the forces and the couple shown 250 N in figure and locate it with respect to point (A).

## 4/ the text :-

## DISTRIBUTED LOADS :

1:Uniformly Distributed Loads or rectangular loads

R: resultant of the total weight of construction W/U.L: the weight for unit length
L: the length of construction
NOTE: the location of $(\mathrm{R})$ is in the middle i.e $L / 2$ from $A$ and $B$

2:Varying Loads or triangular loads

$$
\mathrm{R}=1 / 2 * \mathrm{~W} * \mathrm{~L}
$$

NOTE :the location of (R) is:

Example: Determine the resultant of the distributed loads shown in figure and indicate its location from point (A).

Solution:

$$
\begin{aligned}
\mathrm{R} 1=50 \times 9=450 \mathrm{~N} \\
\mathrm{R} 2=1 / 2 \times 50 \times 9=225 \mathrm{~N} \\
\mathrm{R}=\mathrm{R} 1+\mathrm{R}=450+225=675 \mathrm{~N} \downarrow \\
\mathrm{R} * \mathrm{~d}=\mathrm{R} 1 * 4.5+\mathrm{R} 2 * 6 \\
675 * \mathrm{~d}=450 * 4.5+225 * 6 \\
\mathrm{~d}=5 \mathrm{~m}
\end{aligned}
$$

1- Determine the resultant of the distributed loads shown in figure and indicate its location from point (A).

## 6/ key answer :-

## 1- Pre test :-

$1-R=750 \mathrm{~N}, \mathrm{~d}=4.13 \mathrm{~cm}$

## 2- Post test :-

$1-\mathrm{R}=3600 \mathrm{~N}, \mathrm{~d}=1.1 \mathrm{~cm}$

## 1/Over view

## 1/A -Target population :-

For students of first class
Technical institute
Department of Civil Techniques

## 1/B-Rationale :-

Equilibrium is very important subject to be studied in order to have a full knowledge about determination of the forces effect on bodies and drawing the free body diagram for this reason I have designed this modular unit for this knowledge to be understood .

## 1 / C -Central Idea :-

1-Determination of the forces effect on bodies .
2-Drawing the free body diagram .

## 1/D -Instructions:-

1-Study over view thoroughly.
2-Identify the goal of this modular unit .
3-Do the pre test and if you :-

- get 9 or more you do not need to proceed.
- get less than 9 you have to study this modular unit well.

4-After studying the text of this modular unit ,do the post test, and if you :-

- get 9 or more, so go on studying tenth modular unit .
- get less than 9 , go back and study the ninth modular unit ; or any part of it ; again and then do the post test again .

## 2/Performance Objectives :-

After studying the ninth modular unit , the student will be able to:-
1.Determine the forces effect on bodies .
2.Draw the free body diagram .

## 3/ Pre test :-

1-Determine the resultant of the distributed loads shown in figure and indicate its location from point (A).

## EQUILIBRIUM:

Is the condition of the body when the resultant of forces acting on it is equal to(ZERO)

## Free Body Diagram: F.B.D

Is a diagram shown all the forces acting on the body.

## Types of supports:

| Type of support | Body diagram | F.B.D |
| :---: | :---: | :---: |
| 1- Earth |  |  |
| 2- Smooth surface | Plane <br> Inclined |   <br> N |
| 3- Rough surface |  |   |
| 4- Hinge |   |   |
| 5- Roller |   |  <br> Fy |
| 6- Fixed |  |  |
| 7- Internal hinge | $\square \bigcirc$ |  |
| 8- Cable | $\begin{gathered} \square \\ \square \end{gathered}$ |  |

## 1:Equilibrium of concurrent forces:

The resultant of this system is a force can be calculated by $\mathrm{R}=\sqrt{\mathrm{Rx}^{2}+\mathrm{Ry}^{2}}$ In equilibrium condition $\mathrm{R}=0$ then:

$$
\begin{align*}
& R x=\sum F x=0 \\
& R y=\sum F y=0
\end{align*}
$$

Example: Find all forces which effects on the cylinder (A) shown in figure if all concurrent surfaces are smooth , and the weight of cylinder(A)is(500N), and cylinder (B) is $(300 N)$.
Solution:
From F.B.D of cylinder (B) :
$\sum \mathrm{Fy}=0$
Fz Sin $40-300=0 \Rightarrow \mathrm{Fz}=466.71 \mathrm{~N}$
From F.B.D of cylinder (A) :

$$
\begin{aligned}
& \sum \mathrm{Fx}=0 \\
& \mathrm{Fs}-466.71 \operatorname{Cos} 40=0 \Rightarrow \mathrm{Fs}=357.52 \mathrm{~N} \\
& \sum_{\mathrm{Fk}}^{\mathrm{Fy}=0} \mathrm{500-466.71} \operatorname{Sin} 40=0 \Rightarrow \mathrm{Fk}=800 \mathrm{~N}
\end{aligned}
$$

K

Fk
F.B.D of cylinder (A)

Fz
F.B.D of cylinder (B)

## 5/ Post test :-

1-Find all forces which effects on the cylinder (A) shown in figure if all concurrent surfaces are smooth , and the weight of cylinder(A)is(550N), and cylinder (B) is $(350 \mathrm{~N})$.

## 1- Pre test :-

$1-R=750 \mathrm{~N}, \mathrm{~d}=4.13 \mathrm{~cm}$

## 2- Post test :-

$1-\mathrm{Fz}=568.49 \mathrm{~N}, \mathrm{Fs}=447.97 \mathrm{~N}, F k=900 \mathrm{~N}$

## 1/ Over view

## 1 / A -Target population :-

For students of first class
Technical institute
Department of Civil Techniques

## 1/B -Rationale :-

Equilibrium in non concurrent forces is very important subject to be studied in order to have a full knowledge about determination of reactions at supports and drawing the free body diagram for this reason I have designed this modular unit for this knowledge to be understood .

## 1/C-Central Idea :-

1-Determination of reactions at supports .
2- Drawing the free body diagram .

## 1 / D -Instructions:-

1-Study over view thoroughly.
2-Identify the goal of this modular unit .
3-Do the pre test and if you :-

- get 9 or more you do not need to proceed.
- get less than 9 you have to study this modular unit well .

4-After studying the text of this modular unit ,do the post test, and if you :-

- get 9 or more , so go on studying eleventh modular unit .
- get less than 9 , go back and study the tenth modular unit ; or any part of it ; again and then do the post test again .

## 2/Performance Objectives:-

After studying the tenth modutar unit , the student will be able to:-
1.Determine the reactions at supports .
2.Draw the free body diagram .

## 3/ Pre test :-

1-Define :(equilibrium, free body diagram)

## 4/ the text :-

2:Equilibrium of non concurrent forces :
The resultant of this system is:
A force can be calculated by $\mathrm{R}=\sqrt{\mathrm{Rx}^{2}+\mathrm{Ry}^{2}} \quad$ when $\mathrm{R} \neq 0 \quad \mathrm{OR}$
A couple can be calculated by $\mathrm{Mc}=\sum \mathrm{M} \quad$ when $\mathrm{R}=0$
In equilibrium condition $\mathrm{R}=0$ and $\mathrm{Mc}=0$ then:

$$
\begin{align*}
& R x=\sum F x=0 \\
& R y=\sum F y=0  \tag{2}\\
& M c=\sum M=0 \tag{3}
\end{align*}
$$

Example: Determine the reactions at supports (A) and (B) for the beam loaded as shown In figure .

$$
\begin{array}{ll}
\text { Solution: } & 10 \mathrm{KN} \\
\mathrm{R}=5 \times 5=25 \mathrm{KN} &
\end{array}
$$

$$
\mathrm{Fx}=10 \times 4 / 5=8 \mathrm{KN}
$$

$$
\text { Fy }=10 \times 3 / 5=6 \mathrm{KN}
$$

$$
\sum \mathrm{Fx}=0
$$

$$
\begin{aligned}
& 8-B x=0 \Rightarrow B x=8 K N \\
& \sum M A=0
\end{aligned}
$$

$$
\mathrm{By} \times 5-6 \times 2-25 \times 2.5=0 \quad \neg \mathrm{By}=14.9 \mathrm{KN}
$$

$$
\sum \mathrm{Fy}=0
$$

$\mathrm{Ay}+14.9-25-6=0 \Rightarrow \mathrm{Ay}=16.1 \mathrm{KN}$

(F.B.D)

## 5/ Post test :-

1-Determine reactions at supports (A) and (B) for the beam loaded as shown In figure .

## 6/ key answer :-

## 1- Pre test :-

1-As in text

## 2- Post test :-

$1-\mathrm{Ay}=21.14 \mathrm{~N}, \mathrm{Bx}=12.92 \mathrm{~N}, \mathrm{By}=20,24 \mathrm{~N}$

1-Define of truss .
2-analysis of trusses by using the method of joints .

## 3/ Pre test :-

1-Draw the F.B.D of overhanging beam .

## 4/ the text :-

TRUSSES: A truss is a structure composed of a number of members joined together at their ends to form a rigid body .

Analysis of trusses : is how to determine the forces in each member of the truss .
1:- Method of joints : In this method a single joint is isolated as a free body diagram and applying the equations of concurrent forces $\sum \mathrm{Fx}=0, \sum \mathrm{Fy}=0$.

Example: Determine the forces in each member of the truss shown in figure and Indicate wether the member is in tension or compression .
Solution:
$\sum \mathrm{Fx}=0 \Rightarrow \mathrm{Ax}=0$
$\sum \mathrm{MA}=0$
Ey $\times 4-500 \times 1-500 \times 3-300 \times 2=0$
Ey=650N
$\sum \mathrm{Fy}=0$
$A y+300+650-500-500=0$

$$
\begin{aligned}
& \mathrm{Ay}=650 \mathrm{~N} \\
& \begin{array}{l}
\text { Joint }(\mathrm{A}) \\
\sum \mathrm{Fy}=0
\end{array} \\
& \begin{array}{l}
\mathrm{FAB}=-780 \mathrm{~N}=780 \mathrm{~N}(\mathrm{C}) \\
\sum \mathrm{Fx}=0
\end{array}
\end{aligned}
$$

FAC-780× 1/1.8=0
FAC $=433.3 \mathrm{~N}(\mathrm{~T})$
Joint (B) :
$\sum \mathrm{Fy}=0$
$780 \times 1.5 / 1.8-500-\mathrm{FBC} \times 1.5 / 1.8=0$

$$
\mathrm{FBC}=180 \mathrm{~N}(\mathrm{~T})
$$

$$
\sum \mathrm{Fx}=0
$$

$780 \times 1 / 1.8+\mathrm{FBD}+180 \times 1 / 1.8=0 \quad \Rightarrow \mathrm{FBD}=-533.3 \mathrm{~N}=533.3 \mathrm{~N}(\mathrm{C})$ Joint (C) :
$\sum \mathrm{Fy}=0$
$180 \times 1.5 / 1.8+\mathrm{FCD} \times 1.5 / 1.8-300=0$
FCD $=180 \mathrm{~N}$ (T) $\sum \mathrm{Fx}=0$

FCE- $180 \times 1 / 1.8+180 \times{ }_{T \varepsilon} 1 / 1.8-433.3=0$

## 5/ Post test :-

1-Define : truss, method of joints

Technical institute
Department of Civil Techniques

## 1/B-Rationale :-

Laws of friction is very important subject to be studied in order to have a full knowledge about the determination of maximum frictional force and the types of friction ,for this reason I have designed this modular unit for this knowledge to be understood.

## 1 / C -Central Idea :-

1-Determination of maximum frictional force.
2-Types of friction .

## 1 / D -Instructions:-

1-Study over view thoroughly.
2-Identify the goal of this modular unit .
3-Do the pre test and if you :-

- get 9 or more you do not need to proceed .
- get less than 9 you have to study this modular unit well .

4-After studying the text of this modular unit ,do the post test, and if you :-

- get 9 or more, so go on studying sixteenth modular unit .
- get less than 9 , go back and study the fifteenth modular unit ; or any part of it ; again and then do the post test again .

## 2/Performance Objectives :-

After studying the fifteenth modular unit , the student will be able to:-
1-Define the maximum frictional force.
2-Explane the types of friction .

1- When the body will be move .
2-IF the external force $(\mathrm{P})$ is zero. What is the magnitude of the frictional force .

## 4/ the text :-

Laws of friction:
The maximum frictional force (Fmax.)is proportional with the normal force $(\mathrm{N})$ between the contact surfaces .

Fmax. $\alpha$ N

$$
\text { Fmax. }=\mu * \mathrm{~N} \quad \Longleftrightarrow \quad \mu=\text { Fmax. } / \mathrm{N}
$$

## Angle of friction :

Tan $\Theta=$ Fmax. $/ \mathrm{N}$
$\mu=$ Fmax./ N
$\operatorname{Tan} \Theta=\mu$

Example: Determine the frictional force exerted on the (200N) block weight by the Inclined surface shown in figure if the block is subjected to $(70 \mathrm{~N})$ force ( $\mu=0.2$ ).

## Solution:

Wx=200 $\times \operatorname{Sin} 30=100 \mathrm{~N}$
$\mathrm{Wy}=200 \times \operatorname{Cos} 30=173.2 \mathrm{~N}$
Assume the block will move upward

$\sum \mathrm{Fx}=0$
70-100-F=0
$\mathrm{F}=-30 \mathrm{~N}$

That means the block is try to move downward (F) must be equal or less than( Fmax.)

$$
\begin{aligned}
& \text { Fmax. }=\mu * \mathrm{~N} \\
& \sum \mathrm{Fy}=0 \\
& \mathrm{~N}-70=0 \quad \Rightarrow \mathrm{~N}=70 \mathrm{~N} \\
& \text { Fmax. }=0.2 \times 173.2=34.64 \mathrm{~N}>30 \mathrm{~N} \\
& \quad \mathrm{~F}=30 \mathrm{~N}
\end{aligned}
$$

Example: Calculate the force (P) required to move the ( 500 N ) block weight up the inclined surface shown in figure , if the block is subjected to (200N)force assume ( $\mu=0.5$ ) .
Solution:

$$
\begin{aligned}
& \mathrm{Wx}=500 \times \operatorname{Sin} 30=250 \mathrm{~N} \\
& \mathrm{Wy}=500 \times \cos 30=433 \mathrm{~N} \\
& \sum \mathrm{Fy}=0 \\
& \mathrm{~N}-433=0 \quad \Rightarrow \mathrm{~N}=433 \mathrm{~N} \\
& \mathrm{Fmax} .=\mu * \mathrm{~N}=0.5 \times 433=216.5 \mathrm{~N} \\
& \sum \mathrm{Fy}=0
\end{aligned}
$$

$200+\mathrm{p}-250-216.5=0$

$$
\text { Fmax. }=266.5 \mathrm{~N}
$$

Example: A cylinder of $(100 \mathrm{~N})$ weight is to entrust to a horizontal surface its coefficient of friction $(\mu=0.4)$ and a smooth vertical surface as shown in figure .Determine the frictional force .

## Solution:

From F.B.D of cylinder
Assume FB to the right as shown
$\sum \mathrm{MZ}=0$
$-4900+\mathrm{FB} \times 70=0$
$\mathrm{FB}=70 \mathrm{~N}$
FB must be equal or less than Fmax.

$$
\begin{aligned}
& \text { Fmax. }=\mu^{*} \mathrm{~N} \\
& \sum \mathrm{Fy}=0 \\
& \text { NB- } 100=0 \quad \Rightarrow \mathrm{NB}=100 \mathrm{~N}
\end{aligned}
$$

$$
\text { Fmax. }=0.4 \times 100=40 \mathrm{~N}<70 \mathrm{~N}
$$

$$
\mathrm{FB}=40 \mathrm{~N}
$$

Example: A ladder ( 300 N ) weight is rest as shown in figure ,if the vertical wall is smooth and the horizontal surface has ( $\mu=0.2$ ).Determine the distance from point(B) which make the ladder move when a boy of (150N)weight try to going up the ladder .

## Solution:

From F.B.D of ladder:
$\sum \mathrm{Fy}=0$

N-300-150=0
$\mathrm{N}=450 \mathrm{~N}$

$$
\begin{aligned}
\text { Fmax. } & =\mu * \mathrm{~N} \\
& =0.2 \times 450=90 \mathrm{~N}
\end{aligned}
$$

$$
\mathrm{Z}=\sqrt{(2.6)^{2}-(2.4)^{2}}=1 \mathrm{~m}
$$

$$
\sum \mathrm{MB}=0
$$

F.B.D of ladder

Example: Determine the force $(\mathrm{P})$ required to move the $(400 \mathrm{~N})$ block weight shown in figure if the horizontal surface has ( $\mu=0.34$ ) .

## Solution:

The block is either slides or overturn
1-the block is slides
From (F.B.D 1 )
$\sum F x=0$

$\mathrm{P}=\mathrm{Fmax}$.
$\sum \mathrm{Fy}=0 \Rightarrow \mathrm{~N}=400 \mathrm{~N}$
Fmax. $=\mu^{*} \mathrm{~N}=0.34 \times 400=136 \mathrm{~N}$

$$
\mathrm{P}=136 \mathrm{~N}
$$

2-the block is overturn
From (F.B.D 2 )

$$
\sum \mathrm{MA}=0
$$

$25 \times \mathrm{p}-400 \times 10=0$

$$
\mathrm{P}=160 \mathrm{~N}
$$

The block is slides and $\mathrm{P}=136 \mathrm{~N}$

F.B.D 1

F.B.D 2

## 5/ Post test :-

1- Calculate the force $(\mathrm{P})$ required to move the $(600 \mathrm{~N})$ block weight up the inclined surface shown in figure , if the block is subjected to (250N)force assume ( $\mu=0.5$ ) .

## 6/ key answer :-

1- Pre test :-
1-As in text.
2- As in text.

## 2- Post test :-

$1-\mathrm{P}=309.8 \mathrm{~N}$.

- get less than 9 , go back and study the seventeenth modular unit; or any part of it ; again and then do the post test again .

# 2/Performance Objectives:- 

After studying the seventeenth modular unit , the student will be able to:-
1-Determine the centroid of different complex shapes.

## 3/ Pre test :-

1-Locate with drawing the centroid of triangle.
2- Locate with drawing the centroid of a quarter circle .

## 2:- Centroids of complex shapes :

NOTE: the coordinates ( $\mathrm{x}, \mathrm{y}$ ) of centroid of any non uniformly area about X and Y axes can be found by :

$$
\bar{X}=\frac{\sum \mathrm{aixi}}{\sum \mathrm{ai}}
$$

$$
\overline{\mathrm{Y}}=\frac{\sum \text { aiyi }}{\sum \mathrm{ai}}
$$

Example: Determine the centroid of the shaded area shown in figure with respect to $(\mathrm{X})$ and (Y) axes .

## Solution:

| Fig. | ai | xi | yi | aixi | aiyi |
| :---: | :--- | :--- | :--- | :--- | :--- |
| $\square$ | $4 \times 6=24$ | 2 | 3 | 48 | 72 |
| $\square$ | $4 \times 6 / 2=12$ | 5.33 | 2 | 64 | 24 |
| $\bigcirc$ | $-\pi(1)^{2}=-3.14$ | 2 | 3 | -6.28 | -9.42 |
| $\sum 32.86$ |  |  |  |  |  |

$\mathrm{X}=105.72 / 32.86=3.2 \mathrm{Cm}$
$\mathrm{Y}=86.58 / 32.86=2.6 \mathrm{Cm}$

Example : Determine the centroid of the shaded area shown in figure with respect to $(\mathrm{X})$ and $(\mathrm{Y})$ axes .

Solution:

| Fig. | ai | xi | yi | aixi | aiyi |
| :--- | :--- | :---: | :---: | :---: | :---: |
|  | $4 \times 9=36$ | 0 | 2 | 0 | 72 |
|  | $1 / 2 \times 6 \times 9=27$ | -1.5 | -2 | -40.5 | -54 |
|  | $-\pi(2)^{2} / 2=-6.283$ | $-(4.5-0.424 \times 2)$ <br> $=-3.652$ | 2 | 22.945 | -12.566 |
| $\vdots$ |  |  |  |  |  |
| $\vdots$ |  |  |  |  |  |

Example: Determine the centroid of the shaded area shown in figure with respect to $(\mathrm{X})$ and (Y) axes .

## Solution:

| Fig. | ai | xi | yi | aixi | aiyi |
| :---: | :--- | :---: | :---: | :--- | :--- |
|  | $4 \times 6=24$ | 2 | 3 | 48 | 72 |
|  | $1 / 2 \times 3 \times 6=9$ | -1 | 2 | -9 | 18 |
| -1 <br> $\vdots$ | $-\pi(3)^{2} / 4=-7.069$ | $4-(0.424 \times 3)$ <br> $=2.728$ | $6-(0.424 \times 3)$ <br> $=4.728$ | -19.27 | -33.4 |

$\sum \quad 25.931$
$19.73 \quad 56.6$

$$
X=19.73 / 25.931=0.76 \mathrm{Cm}
$$

$$
\mathrm{Y}=56.6 / 25.931=2.18 \mathrm{Cm}
$$

1- Determine the centroid of the shaded area shown in figure with respect to (X) and $(\mathrm{Y})$ axes .

## 1- Pre test :-

## $1 /$ A -Target population :-

For students of first class
Technical institute
Department of Civil Techniques

## 1/B -Rationale :-

Moment of inertia is very important subject to be studied in order to have a full knowledge about the definition and the laws of moment of inertia for different simple shapes ,for this reason I have designed this modular unit for this knowledge to be understood .

## 1 / C -Central Idea :-

1 -Definition of moment of inertia.
2-The laws of moment of inertia for different simple shapes .

## 1 / D -Instructions:-

1-Study over view thoroughly.
2-Identify the goal of this modular unit .
3-Do the pre test and if you :-

- get 9 or more you do not need to proceed .
- get less than 9 you have to study this modular unit well .

4-After studying the text of this modular unit ,do the post test, and if you :-

- get 9 or more, so go on studying nineteenth modular unit .
- get less than 9 , go back and study the eighteenth modular unit; or any part of it ; again and then do the post test again .

## 2/Performance Objectives :-

After studying the eighteenthmodular unit , the student will be able to:-
1-Define the moment of inertia .
2-Write the laws of moment of inertia for different simple shapes.

## 3/ Pre test :-

1-Determine the centroid of the shaded area shown in figure with respect to (X) and $(\mathrm{Y})$ axes .

Moment of Inertia:
(I)

The moment of inertia of an area is equal to the product of this area by the square distance about the axis of rotation .

$$
\mathrm{I}=\mathrm{A}^{*} \mathrm{~d}^{2}
$$

Transfer formula for moment of inertia :

$$
\mathrm{Ix}=\mathrm{Ix}+\mathrm{A}^{*} \mathrm{~d}^{2}
$$

Units of moment of inertia : $\mathrm{mm}^{4}, \quad \mathrm{Cm}^{4}$

Polar moment of inertia : $\mathrm{Ij}_{0}$

$$
\mathrm{Ijo}=\mathrm{Ix}+\mathrm{Iy}
$$

Radius of gyration : Kx

$$
K x=\sqrt{I / A}
$$

1:-Moment of inertia for the simple shapes :

| Shape | Moment of inertia (I) | Radius of gyration (K) |
| :---: | :---: | :---: |
|  | $\mathrm{Ix}=\mathrm{bh}^{3} / 12$ $\mathrm{Ix}=\mathrm{bh}^{3} / 3$ | $\begin{aligned} & \mathrm{Kx}=\mathrm{h} / \sqrt{12} \\ & \mathrm{Kx}=\mathrm{h} / \sqrt{3} \end{aligned}$ |
|  | $\mathrm{Ix}=\mathrm{bh}^{3} / 36$ $\mathrm{Ix}=\mathrm{bh}^{3} / 12$ | $\begin{aligned} & \mathrm{Kx}=\mathrm{h} / \sqrt{18} \\ & \mathrm{Kx}=\mathrm{h} / \sqrt{6} \end{aligned}$ |
|  | $I x=I y=\pi r^{4} / 4$ | $\mathrm{Kx}=\mathrm{r} / 2$ |
|  | $\begin{aligned} & \mathrm{Ix}=0.11 \mathrm{r}^{4} \\ & - \\ & \mathrm{Ix}=\mathrm{Iy}=\pi \mathrm{r}^{4} / 8 \end{aligned}$ | $\begin{gathered} K x=K y=r / 2 \\ - \\ K x=0.264 r \end{gathered}$ |
|  | $\begin{aligned} & \mathrm{Ix}=\mathrm{Iy}=\pi \mathrm{r}^{4} / 16 \\ & -\quad- \\ & \mathrm{Ix}=\mathrm{Iy}=0.055 \mathrm{r}^{4} \end{aligned}$ | $\begin{aligned} & K x=K y=r / 2 \\ & -\quad- \\ & K x=K y=0.264 r \end{aligned}$ |

1-Define the moment of inertia.
2-What is the unit of moment of inertia .

## 6/ key answer :-

## 1- Pre test :-

$1-\mathrm{X}=0.85 \mathrm{Cm}, \mathrm{Y}=2.84 \mathrm{Cm}$.

## 2- Post test :-

1-As in text.
2-As in text.

## 1/Over view

## 1/A -Target population :-

For students of first class
Technical institute
Department of Civil Techniques

## 1/B -Rationale :-

Moment of inertia for complex shapes is very important subject to be studied in order to have a full knowledge about the determination of moment of inertia for complex shapes about any axis ,for this reason I have designed this modular unit for this knowledge to be understood .

## 1 / C -Central Idea :-

1-Determination of moment of inertia for complex shapes about any axis .

## 1 / D -Instructions:-

1-Study over view thoroughly.
2-Identify the goal of this modular unit .
3-Do the pre test and if you :-

- get 9 or more you do not need to proceed.
- get less than 9 you have to study this modular unit well.

4-After studying the text of this modular unit ,do the post test, and if you :-

- get 9 or more , so go on studying twentieth modular unit .
- get less than 9 , go back and study the nineteenth modular unit ; or any part of it ; again and then do the post test again .

## 2/Performance Objectives :-

After studying the nineteenth modular unit , the student will be able to:-
1-Determine the moment of inertia for complex shapes about any axis .

## 3/ Pre test :-

1-A rectangle its dimensions ( $30 * 50$ ) cm .Determine (Ix) .

Example: For the shaded area shown in figure .Determine the moment of inertia about (b-b)axis if the moment of inertia about (a-a)axis is (8 $\mathrm{cm}^{4}$ ).

## Solution:

$$
\mathrm{Ia}=\mathrm{Ix}+\mathrm{Ad}^{2}
$$

$$
8=\mathrm{Ix}+(2 * 3) *(1)^{2}
$$

$$
\mathrm{Ix}=2 \mathrm{Cm}
$$

$$
\begin{aligned}
\mathrm{Ib} & =\mathrm{Ix}+\mathrm{Ad}^{2} \\
& =2+6^{*}(2)^{2}=26 \mathrm{~cm}^{4}
\end{aligned}
$$

NOTE: when Ia is unknown in example :

$$
\mathrm{Ib}=\mathrm{bh}^{3} / 12+\mathrm{Ad}^{2}=3^{*}(2)^{3} / 12+6^{*}(2)^{2}=26 \mathrm{~cm}^{4}
$$

Example: Determine the moment of inertia of the shaded area shown in figure with respect to (xi-xi) axis .

## Solution:

$$
\begin{aligned}
& \mathrm{A} 1=12 \times 3=36 \mathrm{Cm}^{2} \\
& \mathrm{~A} 2=15 \times 3=45 \mathrm{Cm}^{2}
\end{aligned}
$$

For (A1):

$$
\begin{aligned}
\mathrm{Ixi} & =\mathrm{Ix}+\mathrm{Ad}^{2} \\
= & \mathrm{bh}^{3} / 12+\mathrm{Ad}^{2} \\
& =3^{*}(12)^{3} / 12+36^{*}(13.5)^{2} \\
& =6993 \mathrm{~cm}^{4} \quad(+)
\end{aligned}
$$

For (A2):

$$
\begin{aligned}
\text { Ixi } & =\mathrm{Ix}+\mathrm{Ad}^{2} \\
& =\mathrm{bh}^{3} / 12+\mathrm{Ad}^{2} \\
& =15^{*}(3)^{3} / 12+45^{*}(6)^{2} \\
& =1653.75 \mathrm{~cm}^{4} \quad(+)
\end{aligned}
$$

Ixi $($ total $)=6993+1653.75=8646.75 \mathrm{~cm}^{4}$
Example: Determine the moment of inertia of the shaded area shown in figure with respect to( x ) axis .

## Solution:

$\mathrm{A} 1=4 \times 6=24 \mathrm{Cm}^{2}$
A $2=1 / 2 \times 3 \times 6=9 \mathrm{Cm}^{2}$
$\mathrm{A} 3=\pi(3)^{2} / 4=7.06 \mathrm{Cm}^{2}$

For(A1) :
$\mathrm{Ix}=\mathrm{bh}^{3} / 12+\mathrm{Ad}^{2}=4^{*}(6)^{3} / 12+24 *(3)^{2}=288 \mathrm{Cm}^{4} \quad(+)$
For(A2) :
$\mathrm{Ix}=\mathrm{bh}^{3} / 36+\mathrm{Ad}^{2}=3^{*}(6)^{3} / 36+9 *(2)^{2}=54 \mathrm{Cm}^{4} \quad(+)$
For(A3) :
$\mathrm{Ix}=0.055(\mathrm{r})^{4}+\mathrm{Ad}^{2}=0.055^{*}(3)^{4}+7.06 *(4.728)^{2}=162.27 \mathrm{Cm}^{4}$
Ix (total) $=288+54-162.27=179.73 \mathrm{Cm}^{4}$

## 5/ Post test :-

1- For the shaded area shown in figure .Determine the moment of inertia about (b-b)axis if the moment of inertia about (a-a)axis is $\left(8 \mathrm{~cm}^{4}\right)$.

## 6/ key answer :-

1- Pre test :- $1-\mathrm{Ix}=0.31 * 10^{6} \mathrm{~cm}^{4}$
2- Post test : $1-\mathrm{Ib}=67.5 \mathrm{~cm}^{4}$

## 7/Sources :-

1-Singer, Ferdinand L. , 1975
Engineering Mechanics, $3{ }^{\text {rd }}$ edition ,New York ,Harper and Row publisher

## 2-Higdon Archie and William B. 1968

## 1/ Over view

## 1 / A -Target population :-

For students of first class
Technical institute
Department of Civil Techniques

## 1/B -Rationale :-

Solving more applications about moment of inertia for complex shapes is very important subject to be studied in order to have a full knowledge about the determination of moment of inertia for complex shapes about any axis, for this reason I have designed this modular unit for this knowledge to be understood .

## 1 / C -Central Idea :-

1-Determination of moment of inertia for complex shapes about any axis .

## 1 / D -Instructions:-

1-Study over view thoroughly.
2-Identify the goal of this modular unit.
3-Do the pre test and if you :-

- get 9 or more you do not need to proceed .
- get less than 9 you have to study this modular unit well .

4-After studying the text of this modular unit ,do the post test, and if you :-

- get 9 or more, so go on studying twenty-first modular unit.
- get less than 9 , go back and study the twentieth modular unit ; or any part of it ; again and then do the post test again .

## 2/Performance Objectives :-

After studying the twentieth modular unit , the student will be able to:-
1-Determine the moment of inertia for complex shapes about any axis .

## 3/ Pre test :-

1-Determine the moment of inertia of the shaded area shown in figure with respect to (xi-xi) axis .

## 4/ the text :-

Example: A column its dimensions $(30 \times 60) \mathrm{cm}$ and $(2.5 \mathrm{~m})$ height as shown in figure Indicate the suitable case to resist a wind from east .

## Solution:

## CASE 1:

$$
\begin{aligned}
\mathrm{Iy} & =\mathrm{hb}{ }^{3} / 12 \\
& =30 *(60)^{3} / 12=540000 \mathrm{~cm}^{4}
\end{aligned}
$$

## CASE 2:

$$
\mathrm{Iy}=60 *(30)^{3 / 12=135000} \mathrm{~cm}^{4}
$$

We choose case 1 because the resistance
is more than case 2 i.e
the smaller dimension put in the face of the wind

Example: Determine the polar moment of inertia( $\left(\mathrm{Ij}_{0}\right)$ for the shaded area shown in figure. Assume ( $\mathrm{r} 1=30 \mathrm{Cm}, \mathrm{r} 2=40 \mathrm{Cm}$ ).

## Solution:

$$
\begin{aligned}
& \left(\mathrm{I}_{\bar{x})}^{-}=(\mathrm{I} \bar{y}) 1=\pi \mathrm{r}^{4} / 4=\pi *(30)^{4} / 4=0.63 * 10^{6} \mathrm{~cm}^{4}(-)\right. \\
& \left(\mathrm{I}_{x}^{\bar{x}}\right) 2=(\mathrm{I} \bar{y}) 2=\pi \mathrm{r}^{4} / 4=\pi *(40)^{4} / 4=2^{*} 10^{6} \mathrm{~cm}^{4}(+) \\
& \left(\mathrm{Ij}_{0}\right) 1=(\mathrm{I} \bar{x}) 1+(\mathrm{I} \bar{y}) 1=1.26 * 10^{6} \mathrm{~cm}^{4}(-) \\
& \left(\mathrm{Ij}_{0}\right) 2=\left(\mathrm{I}^{-} \bar{x}\right) 2+\left(\mathrm{I}_{\bar{y}}^{\bar{y}}\right) 2=4 * 10^{6} \mathrm{~cm}^{4}(+) \\
& \left(\mathrm{Ij}_{0}\right) \text { total }=\left(\mathrm{Ij}_{0}\right) 1+\left(\mathrm{I}_{0}\right) 2=2.74^{*} 10^{6} \mathrm{~cm}^{4}
\end{aligned}
$$

Example: Determine the moment of inertia of the shaded area shown in figure with respect to (n-n) axis .

Solution:
$\mathrm{A} 1=6 \times 9=54 \mathrm{Cm}^{2}$
$\mathrm{A} 2=1 / 2 \times 4 \times 9=18 \mathrm{Cm}^{2}$
$\mathrm{A} 3=\pi(3)^{2} / 2=14.14 \mathrm{Cm}^{2}$

$$
\begin{aligned}
\mathrm{In} & =\mathrm{bh}^{3} / 12+\mathrm{Ad}^{2} \\
& =6 *(9)^{3} / 12+54 *(2.5)^{2}=702 \mathrm{~cm}^{4} \quad(+)
\end{aligned}
$$

For(A2):

$$
\begin{aligned}
\mathrm{In} & =\mathrm{bh}^{3} / 36+\mathrm{Ad}^{2} \\
& =4^{*}(9)^{3} / 36+18^{*}(4)^{2}=369 \mathrm{~cm}^{4}
\end{aligned}
$$

## For(A3):

$$
\begin{aligned}
\text { In }= & 0.11 r^{4}+\mathrm{Ad}^{2} \\
= & 0.11 *(3)^{4}+14.14 *(3.272)^{2}=160.29 \mathrm{~cm}^{4} \quad(+) \\
& \quad \operatorname{In}(\text { total })=702+369+160.29=1231.29 \mathrm{~cm}^{4}
\end{aligned}
$$

## 5/ Post test :-

1-Determine the moment of inertia of the shaded area shown in figure with respect to (X) axis .

## 6/ key answer :-

1- Pre test :- 1-Ixi=5186.33 $\mathrm{cm}^{4}$.
2- Post test : 1-Ix=330.96 $\mathrm{cm}^{4}$

## 7/Sources :-

## 1/Over view

## 1 / A -Target population :-

For students of first class
Technical institute
Department of Civil Techniques

## 1/B-Rationale :-

Strength of materials is very important subject to be studied in order to have a full knowledge about the definition of stress, types of stresses, factor of safety for this reason I have designed this modular unit for this knowledge to be understood.

## 1 / C -Central Idea :-

1- Definition of stress.
2-Types of stresses .
3-Definition of factor of safety .

## 1/D -Instructions:-

1-Study over view thoroughly.
2-Identify the goal of this modular unit .
3-Do the pre test and if you :-

- get 9 or more you do not need to proceed .
- get less than 9 you have to study this modular unit well .

4-After studying the text of this modular unit ,do the post test, and if you :-

- get 9 or more , so go on studying twenty-second modular unit.
- get less than 9 , go back and study the twenty-first modular unit ; or any part of it ; again and then do the post test again .

## 2/Performance Objectives :-

After studying the twenty-first modular unit , the student will be able to:-
1-Define the stress, types of stresses .
2-Define the factor of safety .

1-Determine the moment of inertia of the shaded area shown in figure with respect to $(\mathrm{N}-\mathrm{N})$ axis .

## STRENGTH OF MATERIALS

Deals with relations between external loads and their internal effects on bodies .

## STRESS : $\sigma$

Is the unit strength of a material and can be calculated by :

P: axial force
A: cross sectional area
Units of stress : $\mathrm{N} / \mathrm{m}^{2}=\mathrm{pa}$. (pascal)

$$
\mathrm{Mpa} .=\text { mega pascal }=10^{6} \mathrm{pa} .=\mathrm{N} / \mathrm{mm}^{2}
$$

## Types of stresses :

1:- Tensile stress
2:- Compressive stress

Example: An aluminum bar of ( 40 mm ) diameter carries an axial load of (12560N). Determine the stress in the bar .
Solution:

$$
\sigma=\mathrm{P} / \mathrm{A}
$$

Cross sectional area $(\mathrm{A})=\pi *(20 / 1000)^{2}=1256^{*} 10^{-6} \mathrm{~mm}^{2}$

$$
\sigma=12560 / 1256 * 10^{-6}=10 * 10^{6} \text { pa. }=10 \mathrm{Mpa}
$$

## 3:-Shearing stress: $\tau$

it is caused by a force acting parallel to area resisting the force.

V :shearing force
A :area of parallel cross section

## 4:-Bearing stress:

Is a contact pressure between separate bodies such as the soil pressure ,force on bearing plate.

Example : Determine the shearing stress in the rivet shown in figure due to the ( 30 KN ) applying load if the diameter of the rivet is ( 20 mm ) .

## Solution:

$$
\begin{aligned}
& \mathrm{d}=20+1.5=21.5 \mathrm{~mm} \\
& \begin{aligned}
\tau & =\mathrm{V} / \mathrm{A} \\
& =30^{*} 1000 /(21.5 / 2)^{2 *} \pi \\
& =82.7 \mathrm{Mpa} .
\end{aligned}
\end{aligned}
$$

## FACTOR OF SAFETY: F.S

F.S=Ultimate stress / Working stress (about 4 to 10 )

Example : $\mathrm{A}(15 * 50) \mathrm{mm}$ steel bar carries an axial load of ( 7.5 ton ), if the maximum tensile load which can be carries by a specimen of the same steel has cross sectional area of (1.6) $\mathrm{Cm}^{2}$ is (6.4ton). Find the factor of safety .
Solution:
Working stress $=7.5 * 1000 * 9.8 / 15 * 50=98 \mathrm{Mpa}$.
Ultimate stress $=6.4 * 1000 * 9.8 / 1.6 * 100=392 \mathrm{Mpa}$.
Factor of safety $=392 / 98=4$

1-An aluminum bar of ( 50 mm ) diameter carries an axial load of ( 13000 N ). Determine the stress in the bar .

## 6/ key answer :-

## 1- Pre test :-

1-In=2065.28 $\mathrm{cm}^{4}$.

## 2- Post test :

1-6.6Mpa.

## 1/Over view

## 1 / A -Target population :-

For students of first class
Technical institute
Department of Civil Techniques

## 1/B -Rationale :-

Strain is very important subject to be studied in order to have a full knowledge about the determination of deformation caused in bodies after loading, for this reason I have designed this modular unit for this knowledge to be understood.

## 1 / C -Central Idea :-

1- Definition of strain .
2-determination of deformation

## 1 / D -Instructions:-

1-Study over view thoroughly.
2-Identify the goal of this modular unit .
3-Do the pre test and if you :-

- get 9 or more you do not need to proceed.
- get less than 9 you have to study this modular unit well .

4-After studying the text of this modular unit ,do the post test, and if you :-

- get 9 or more , so go on studying twenty-third modular unit .
- get less than 9 , go back and study the twenty- second modular unit; or any part of it ; again and then do the post test again .

## 2/Performance Objectives :-

After studying the twenty-second modular unit , the student will be able to:-1-Define the strain .
2-Deternine the deformation .

## 3/ Pre test :-

1-Determine the shearing stress in the rivet shown in figure due to the ( 40 KN ) applying load if the diameter of the rivet is $(25 \mathrm{~mm})$.

## STRAIN: $\boldsymbol{E}$

Is the unit deformation caused by stress
Strain $=$ Change in length / Original length

$$
\varepsilon=\delta / \mathrm{L}
$$

Example : Determine the strain of a body caused by the applied force (p) if the decrease in length is $(2 \mathrm{Cm})$, and the length of the body is $(200 \mathrm{Cm})$. Solution:

$$
\begin{aligned}
\mathcal{E} & =\delta / \mathrm{L} \\
& =2 / 200=0.01
\end{aligned}
$$

## HOOK'S LAW: Axial deformation

The slope of stress-strain curve (straight line portion)=modulus of elasticity=E

$$
\mathrm{E}=\sigma / \mathcal{E} \quad \Longleftrightarrow \quad \sigma=\mathrm{E} * \mathcal{E}
$$

NOTE: the units of $(\mathrm{E})$ is the same units Of stress, for example:
E for steel $=200^{*} 10^{9}$ pa. $=200 \mathrm{Gpa}$.
E for aluminum $=70^{*} 10^{9} \mathrm{pa} .=70 \mathrm{Gpa}$.
Gpa. $=$ gega pascal $=10^{9}$ pa.

$$
\begin{gathered}
\sigma=\mathrm{E} * \mathcal{E} \\
\mathrm{P} / \mathrm{A}=\mathrm{E} * \delta / \mathrm{L}
\end{gathered}
$$

$$
\delta=\mathrm{PL} / \mathrm{AE}
$$

## 5/ Post test :-

1-Determine the strain of a body caused by the applied force (p) if the decrease in length is $(2.5 \mathrm{Cm})$, and the length of the body is $(400 \mathrm{Cm})$.

## 6/ key answer :-

1- Pre test :-
1- $\tau=72.52 \mathrm{Mpa}$.
2- Post test :
1- $\boldsymbol{\mathcal { E }}=0.006$

## 1/Over view

## 1 / A -Target population :-

For students of first class
Technical institute
Department of Civil Techniques

## 1/B -Rationale :-

Poison's ratio is very important subject to be studied in order to have a full knowledge about the relation between the lateral strain longitudinal strain caused in bodies after loading, for this reason I have designed this modular unit for this knowledge to be understood .

## 1 / C -Central Idea :-

1- Definition poison's ratio .
2-Solving application on stress, strain .

## 1 / D -Instructions:-

1-Study over view thoroughly.
2-Identify the goal of this modular unit .
3-Do the pre test and if you :-

- get 9 or more you do not need to proceed.
- get less than 9 you have to study this modular unit well.

4-After studying the text of this modular unit ,do the post test, and if you :-

- get 9 or more, so go on studying twenty-fourth modular unit .
- get less than 9 , go back and study the twenty-third modular unit ; or any part of it ; again and then do the post test again .

## 2/ Performance Objectives :-

After studying the twenty-third modular unit , the student will be able to:-
1-Define poison's ratio .
2-Solve applications on stress, strain .

## 3/ Pre test :-

1- Determine the strain of a body caused by the applied force (p) if the decrease in length is $(1.5 \mathrm{Cm})$, and the length of the body is $(250 \mathrm{Cm})$.

POISSON'S RATIO:
$V$
$\boldsymbol{V}=$ Lateral strain / Longitudinal strain
$\boldsymbol{V}=\mathcal{E}_{\mathrm{y}} / \mathcal{E}_{\mathrm{x}}$

Example :A steel wire (8m) long hanging vertically support a tensile load of (4000N) Determine the required diameter and the elongation in the wire if the stress is not exceed ( 50 Mpa .) .Assume Es=200Gpa.
Solution:

$$
\begin{aligned}
& \left.\begin{array}{l}
\sigma=\mathrm{P} / \mathrm{A} \\
50 * 10^{6}=4000 / \mathrm{A} \\
\mathrm{~A}=80^{*} 10^{-6} \mathrm{~m}^{2}=80 \mathrm{~mm}^{2} \\
\mathrm{~A}=\pi \mathrm{r}^{2} \\
80=\pi \mathrm{r}^{2} \quad \Longrightarrow \mathrm{r}=5.04 \mathrm{~mm} \longrightarrow \mathrm{~d}=10.1 \mathrm{~mm}=1 \mathrm{Cm} \\
\mathrm{E}=\sigma / \boldsymbol{\varepsilon} \\
200 * 10^{9}=50^{*} 10^{6} / \boldsymbol{E} \\
\boldsymbol{E}
\end{array}\right) \Longrightarrow 0.25^{*} 10^{-3} \\
& \boldsymbol{E}=\delta / \mathrm{L} \\
& 0.25 * 10^{-3}=\delta / 8^{*} 10^{3} \\
& \delta=2 \mathrm{~mm}
\end{aligned}
$$

Example :A uniformly bar of $\left(1 \mathrm{Cm}^{2}\right)$ area .Axial loads are applied as shown in figure .Find the total deformation . Assume (E=200Gpa.) .
Solution:
$\delta=\mathrm{PL} / \mathrm{AE}$

$$
\begin{aligned}
\delta_{p}= & 6 * 1000 * 6 / 1 * 10^{-4} * 200 * 10^{9} \quad 6 \mathrm{KN} \leftarrow \mathrm{p} \quad \mathrm{O}_{\mathrm{K} R} \text { ( tension ) } \\
& =0.0018 \mathrm{~m}=1.8 \mathrm{~mm}(+)
\end{aligned}
$$

4KN

$$
\delta_{e}=2 * 1000 * 2 / 1 * 10^{-4} * 200 * 10^{9}
$$

$$
=0.0002 \mathrm{~m}=0.2 \mathrm{~mm} \quad(+)
$$

$$
\delta_{R}=4 * 1000 * 4 / 1 * 10^{-4} * 200 * 10^{9}
$$

$$
=0.0008 \mathrm{~m}=0.8 \mathrm{~mm}
$$

$$
\begin{aligned}
\delta \text { total } & =1.8+0.2+0.8 \\
& =2.8 \mathrm{~mm}
\end{aligned}
$$

Example: An aluminum tube is rigidly fastened between a bronze bar and a steel bar .Axial loads are applied as shown in figure. Determine the stress in each material

Solution: $\quad \sigma=\mathrm{P} / \mathrm{A}$

$$
\begin{aligned}
\sigma_{b}=20 * 1000 / 700 * 10^{-6}= & 28.6^{*} 10^{6} \mathrm{pa} \\
& =28.6 \mathrm{Mpa} .(\mathrm{C})
\end{aligned}
$$

compression

$$
\begin{aligned}
\sigma_{a}=5 * 1000 / 1000^{*} 10^{-6} & =5 * 10^{6} \mathrm{pa} \\
& =5 \mathrm{Mpa} .(\mathrm{C})
\end{aligned}
$$

compression

$$
\begin{array}{r}
\sigma_{S}=10 * 1000 / 800 * 10^{-6}=12.5 * 10^{6} \mathrm{pa} \\
=12.5 \mathrm{Mpa} .(\mathrm{T})
\end{array}
$$

tension

Example: Determine the maximum safe load (p) which may be applied on the steel plate shown in figure if the average tensile stress is ( 160 Mpa. ) .

Solution:
Area of section $=200 * 10=2000 \mathrm{~mm}^{2}$
Area of two holes $=2 * 20 * 10=400 \mathrm{~mm}^{2}$
Net area of section $=2000-400$ $=1600 \mathrm{~mm}^{2}$
$=1600 * 10^{-6} \mathrm{~m}^{2}$

$$
\begin{aligned}
\sigma & =\mathrm{P} / \mathrm{A} \\
\mathrm{P} & =\mathrm{A} * \sigma \\
& =1600 * 10^{-6} * 160 * 10^{6} \\
& =256000 \mathrm{~N} \\
& =256 \mathrm{KN}
\end{aligned}
$$

Example: $\mathrm{A}(18 \mathrm{KN})$ weight is supported by two steel wires as shown in figure
.Determine the cross sectional area of each wire if the tensile stresses in the wires are limited to ( 100 Mpa .) .

Solution:
$\sum \mathrm{Fx}=0$
$\mathrm{T} 2 * 4 / 5-\mathrm{T} 1 * 4 / 5=0$
$\mathrm{T} 1=\mathrm{T} 2=\mathrm{T}$
$\sum \mathrm{Fy}=0$
$\mathrm{T} * 3 / 5+\mathrm{T} * 3 / 5-18=0$
$\mathrm{T}=9 * 5 / 3=15 \mathrm{KN}$
$\sigma=\mathrm{P} / \mathrm{A}$
$\mathrm{A}=\mathrm{P} / \sigma$
$=15^{*} 1000 / 100^{*} 10^{6}$
$=150 * 10^{-6} \mathrm{~m}^{2}$
$=150 \mathrm{~mm}^{2}$
B
C

$$
\delta=\mathrm{PL} / \mathrm{AE}
$$

## 5/ Post test :-

1-A uniformly bar of $\left(1 \mathrm{Cm}^{2}\right)$ area .Axial loads are applied as shown in figure .
Find the total deformation. Assume (E=200Gpa.) .

## 1- Pre test :-

1- $\mathcal{E}=0.006$.

## 2- Post test :

$1-\delta$ total $=3.3 \mathrm{~mm}$

## SHEAR FORCE AND BENDING MOMENT DIAGRAMS

Shear force : is the summation of vertical external loads acting on the left side of the selected section .
Bending moment: is the summation of moments of all the loads acting to the left of the selected section .

$$
\begin{aligned}
& \mathrm{V}=\left(\sum \mathrm{Fy}\right)_{L} \\
& \mathrm{M}=\left(\sum \mathrm{M}\right)_{L}
\end{aligned}
$$

Example :Draw shear force and bending moment diagrams for the beam loaded as shown in figure .
Solution:
1-determination of reactions

$$
\begin{aligned}
& \sum \mathrm{Fx}=0 \Rightarrow \mathrm{Ax}=0 \\
& \sum \mathrm{MA}=0 \\
& \mathrm{By} * 1.5-1580.5=0 \quad \\
& \begin{array}{l}
\sum \mathrm{Fy}=0 \\
\mathrm{Ay}+5-15=0 \quad \mathrm{By}=5 \mathrm{KN} \\
\end{array} \quad \Rightarrow \mathrm{Ay}=10 \mathrm{KN}
\end{aligned}
$$

2-Drawing of S.F.D and B.M.D by written the equations at section (1-1) and (2-2) .
section (1-1)

$$
\mathrm{V} 1=\sum \mathrm{Fy}=10 \mathrm{KN}
$$

$\mathrm{M} 1=\sum \mathrm{M}=10 \mathrm{X}$
When $\mathrm{x}=0 \quad \mathrm{M} 1=0$
section (2-2)
V2 $=10-15=-5 \mathrm{KN}$
M2 $=10 \mathrm{X}-15$ (X-0.5)

When $\mathrm{x}=0.5 \quad \mathrm{M} 2=5 \mathrm{KN} . \mathrm{m}$

When $\mathrm{x}=1.5 \quad \mathrm{M} 2=0$

## 5/ Post test :-

1-Define with drawing shear force and bending moment in beams .

## 6/ key answer :-

## 1- Pre test :-

$1-\mathrm{d}=11.28 \mathrm{~mm}, \delta=4.5 \mathrm{~mm}$.

## 2- Post test :

1- As in text .

$$

## 2/ Performance Objectives :-

After studying the twenty-fifth modular unit , the student will be able to:-
1-Draw shear force diagram for different types of loading.
2-Draw bending moment diagram for different types of loading .

## 3/ Pre test :-

1-Draw shear force and bending moment diagrams for the beam loaded as shown in figure .

## 4/ the text :-

Example :Draw shear force and bending moment diagrams for the beam loaded as shown in figure .
Solution:

$$
\begin{aligned}
& \text { 1-determination of reactions } \\
& \sum_{\sum \mathrm{Fx}=0} \mathrm{MA} \Rightarrow \mathrm{Bx}=0 \\
& \mathrm{By} * 6-10 * 6 * 3=0 \Rightarrow \mathrm{By}=30 \mathrm{KN} \\
& \sum_{\mathrm{Ay}=0} \mathrm{Fy}+30-6 * 10=0 \quad \Rightarrow \mathrm{Ay}=30 \mathrm{KN}
\end{aligned}
$$

2-Drawing of S.F.D and B.M.D by written the

$$
\begin{array}{lll}
V=30-10 X & \text { when } x=0 & v=30 \mathrm{KN} \\
& \text { when } x=6 & v=-30 \mathrm{KN}
\end{array}
$$

$$
\begin{array}{rlr}
\mathrm{M} & =30 \mathrm{X}-10 \mathrm{X}(\mathrm{X} / 2) \\
& =30 \mathrm{X}-5 \mathrm{X}^{2} & \\
& \text { when } \mathrm{x}=0 & \mathrm{M}=0 \\
& \text { when } \mathrm{x}=6 & \mathrm{M}=0
\end{array}
$$

Note :the maximum bending moment caused when $\mathrm{v}=0$ therefore :

$$
\text { when } \mathrm{x}=3 \quad \text { Mmax. }=45 \mathrm{KN} . \mathrm{m}
$$

Example :Draw shear force and bending moment diagrams for the beam loaded as shown in figure .

$$
\begin{aligned}
& \frac{\text { Solution: }}{1 \text {-determination of reactions }} \\
& \sum \mathrm{Fx}=0 \Rightarrow \mathrm{Ax}=0 \\
& \sum \mathrm{MA}=0 \\
& \begin{array}{l}
-3+\mathrm{Cy} * 3=0 \\
\sum \mathrm{Fy}=0 \\
\mathrm{Ay}+1=0 \Rightarrow \mathrm{Cy}=1 \mathrm{KN} \\
\mathrm{Ay}=-1 \mathrm{KN}=1 \mathrm{KN}
\end{array}
\end{aligned}
$$

2-Drawing of S.F.D and B.M.D by written the equations at section (1-1) and (2-2) .

## STRESSES IN BEAMS: (Rectangular sections)

1 :-Bending stress :
(Flexure stress)
Is the stress caused by the bending moment .
Flexure formula :is the relation between bending stress and the bending moment .

tension

N.A :Neutral axis

$$
\sigma=\mathrm{MY} / \mathrm{I}
$$

$\sigma=$ flexure stress $\left(\mathrm{N} / \mathrm{m}^{2}\right)$ at a distance Y from N.A
$\mathrm{Y}=$ distance from N.A to element
$\mathrm{M}=$ bending moment at the section
I =moment of inertia of the section

$$
\sigma_{\max .}=\mathrm{MC} / \mathrm{I}
$$

$\sigma_{\text {max }}=$ maximum flexure stress
C =the distance from N.A to the top or bottom of the section

## 5/ Post test :-

1-How can we determine the bending stress and the maximum bending stress in beams?

## 6/ key answer :-

## 2/Performance Objectives :-

After studying the twenty-seventh modular unit , the student will be able to:-
1-Determine the shear stress in beams.
2-Determinethe maximum shear stress in beams .

## 3/ Pre test :-

1-Draw a section in abeam shown the tension and compression and N.A location

## 4/ the text :-

2:-Shearing stress:
$\tau$

$$
\begin{aligned}
\tau & =\mathrm{V} \hat{A} \bar{Y} / \mathrm{Ib} \\
\tau_{\text {max. }} & =3 \mathrm{~V} / 2 \mathrm{~A} \\
\mathrm{~A} & =\text { shaded area } \\
\bar{Y} & =\text { distance from centroid of } \hat{A} \text { to the N.A } \\
\mathrm{V} & =\text { vertical shearing force }
\end{aligned}
$$

Example :A cantilever beam ( 110 mm ) wide by ( 220 mm ) height carries the loading Shown in figure .Determine :-
1-the maximum flexure stress
2- the maximum shear stress

## Solution:

1-we draw S.F.D and B.M.D as previous examples Then we find :

$$
\begin{aligned}
& \mathrm{M}_{\text {max. }}=-10.75 \mathrm{KN} . \mathrm{m} \\
& \mathrm{~V}_{\text {max. }}=-8 \mathrm{KN} \\
& \sigma_{\text {max }}=\mathrm{MC} / \mathrm{I} \\
& \mathrm{C}=0.11 \mathrm{~m} \\
& \mathrm{I}=\mathrm{bh} 3 / 12=0.11^{*}(0.22)^{3} / 12=97.6^{*} 10^{-6} \mathrm{~m}^{4} \\
& \sigma_{\text {max }}=10.75^{*} 10^{3 *} 0.11 / 97.6^{*} 10^{-6}=12.11^{*} 10^{6} \mathrm{pa} . \\
&=12.11 \mathrm{Mpa} . \\
& \begin{aligned}
\tau_{\text {max }} & =3 \mathrm{~V} / 2 \mathrm{~A} \\
& =3 * 8^{*} 10^{3} / 2 * 0.11^{*} 0.22 \\
& =0.49^{*} 10^{6} \mathrm{pa} . \\
& =0.49 \mathrm{Mpa} .
\end{aligned}
\end{aligned}
$$

KN.m

$$
\xrightarrow[\mathrm{mm}]{\mathrm{b}=110} \mid
$$

## 5/ Post test :-

1-A cantilever beam ( 115 mm ) wide by $(230 \mathrm{~mm})$ height , if ( $\mathrm{Vmax} .=7.5 \mathrm{KN}$ ), Mmax. $=11 \mathrm{KN} . m$. Determine :

1-the maximum flexure stress
2-the maximum shear stress

## 6/ key answer :-

1- Pre test: 1 -As in text.
2- Post test : $1-\sigma$ max.$=10.8 \mathrm{Mpa}$.,$\tau \max .=0.42 \mathrm{Mpa}$.

4-After studying the text of this modular unit ,do the post test, and if you :-

- get 9 or more, so go on studying twenty-ninth modular unit .
- get less than 9 , go back and study the twenty-eighth modular unit; or any part of it ; again and then do the post test again .

## 2/Performance Objectives:-

After studying the twenty-erghth modular unit , the student will be able to:-
1-Define the method of dealing with non homogeneous beams.
2-Determine the equivalent homogeneous beam .

## 3/ Pre test :-

1-Determine the minimum width (b) of abeam if the bending stress is not exceed (10Mpa.) and the maximum bending moment is ( $5000 \mathrm{~N} . \mathrm{m}$ ) and the depth of the beam is (200mm) .

## 4/ the text :-

## COMPOSITE BEAMS : (Beams of different materials)

The most common method of dealing with a non homogenous beams is to transform it into an equivalent homogenous beam .

a)timber and steel section

b)equivalent wood section

c)equivalent steel section
strain of steel $=$ strain of wood

$$
\begin{aligned}
\varepsilon_{S} & =\varepsilon_{W} \\
\sigma_{s} / E_{S} & =\sigma_{W} / E_{W} \\
P_{S} & =P_{W} \\
A_{S} \sigma_{S} & =A_{W} \sigma_{W}
\end{aligned}
$$

From eq.(1) and eq.(2)

$$
\begin{aligned}
& A_{S}\left(E_{S} / E_{W}\right) \sigma_{W}=A_{W} \sigma_{W} \\
& A_{W}=\mathrm{n} A_{S} \quad, \mathrm{n}=E_{S} / E_{W}
\end{aligned}
$$

## 5/ Post test :-

## 6/ key answer :-

1- Pre tesi: $1-\mathrm{b}=75 \mathrm{~mm}$.
2- Post test : As In text.
1-Draw a section of a beam making from two materials (steel and timber) and the equivalent steel section.

## 1/ Over view

## 1 / A -Target population :-

For students of first class
Technical institute
Department of Civil Techniques

## 1/B -Rationale :-

Reinforced concrete beams is very important subject to be studied in order to have a full knowledge about drawing the equivalent section and determination of location of neutral axis and the maximum bending moment that may be applied, for this reason I have designed this modular unit for this knowledge to be understood .

## 1/C-Central Idea :-

1- Drawing the equivalent section of reinforced concrete beams.
2- Determination of location of neutral axis .
3- Determination of the maximum bending moment that may be applied .

## 1/D -Instructions:-

1-Study over view thoroughly.
2-Identify the goal of this modular unit .
3-Do the pre test and if you :-

- get 9 or more you do not need to proceed.
- get less than 9 you have to study this modular unit well .

4-After studying the text of this modular unit ,do the post test , and if you :-

- get 9 or more, so go on studying thirtieth modular unit .
- get less than 9 , go back and study the twenty-ninth modular unit; or any part of it ; again and then do the post test again .

## 2/Performance Objectives :-

After studying the twenty-ninth modular unit , the student will be able to:-
1-Draw the equivalent section of reinforced concrete beams .
2-Determine the location of neutral axis
3-Determine the maximum bending moment that may be applied .

## 3/ Pre test :-

1-Define the method of dealing with a non homogeneous beams .

## REINFORCED CONCRETE BEAMS

d :the distance from the top of the beam to the center of the reinforcing steel (effective depth)
Kd : the distance from the top of the beam to N.A
NOTE:the N.A is located by applying the principles that the moment of area above the N.A is equal the moment of the area below this axis .

$$
\left(\mathrm{b}^{*} \mathrm{kd}\right)(\mathrm{kd} / 2)=\mathrm{n} A_{S}(\mathrm{~d}-\mathrm{kd})
$$

the resultant compressive force $(\mathrm{C})$ in concrete acts at distance $(\mathrm{kd} / 3)$ from the top of the beam .

$$
\mathrm{M}_{C}=1 / 2 * f_{c}(\mathrm{bkd})(\mathrm{jd})
$$

$$
\mathrm{M}_{s}=f_{s} A_{s}(\mathrm{jd})
$$

C :compressive force in concrete
T :tensile force in steel
$f_{c}$ :maximum compressive stress in concrete
$f_{s}$ :the tensile stress in steel
Average stress in concrete $=f_{c} / 2$

## 5/ Post test :-

1-Draw a section of reinforced concrete beam and its equivalent section .

1-Pre test: 1-As in text.
2- Post test :1-As In text.

## 1/B -Rationale :-

Solving applications on beams making from two materials and reinforced concrete beams is very important subject to be studied in order to have a full knowledge about the determination of equivalent section and location of neutral axis and the bending moment that may be applied, for this reason I have designed this modular unit for this knowledge to be understood .

## 1 / C -Central Idea :-

1-Determination of equivalent section.
2-Determination of location of neutral axis .
3-Determination of bending moment that may be applied .

## 1/D -Instructions:-

1-Study over view thoroughly.
2-Identify the goal of this modular unit .
3-Do the pre test and if you :-

- get 9 or more you do not need to proceed.
- get less than 9 you have to study this modular unit well .

4-After studying the text of this modular unit ,do the post test, and if you :-

- get 9 or more, so go on studying next modular unit .
- get less than 9 , go back and study the thirtieth modular unit ; or any part of it ; again and then do the post test again .

## 2/Performance Objectives :-

After studying the thirtieth modular unit , the student will be able to:-
1-Draw and determine the equivalent section.
2-Determine the location of neutral axis
3-Determine the bending moment that may be applied .

## 3/ Pre test :-

1-Draw a reinforced concrete beam and the equivalent section .

Example : A timber beam (150mm) by ( 300 mm ) is reinforced on the bottom only with a steel strip ( 75 mm ) wide by ( 10 mm ) thick .Determine the maximum resisting moment if the allowable stresses are $\sigma_{s} \leq 120 \mathrm{Mpa}$. And $\sigma_{w} \leq 8 \mathrm{Mpa}$. Assume $(\mathrm{n}=20)$.

## Solution :

$A_{w 1}=150 * 300=45000 \mathrm{~mm}^{2}$
$A_{s}=75 * 10=750 \mathrm{~mm}^{2}$
( $A_{W}$ ) equivalent for steel $=\mathrm{n} A_{s}=20 * 750=15000 \mathrm{~mm}^{2}$
Total equivalent wood area of section $=60000 \mathrm{~mm}^{2}$
Location of N.A from the base of section :

In wood equivalent of the steel :

$$
\sigma_{w}=\sigma_{S} / \mathrm{n}=120 / 20=6 \mathrm{Mpa} .
$$

$$
\mathrm{M}_{s}=6 * 10^{6} * 611 * 10^{-6} / 121 * 10^{-3}=30.39 \mathrm{KN} . \mathrm{m}
$$

The smaller resisting moment $\mathrm{M}_{w}=25.9 \mathrm{KN} . \mathrm{m}$ is the safe resisting moment .
Example :In a reinforced concrete beam $, \mathrm{b}=250 \mathrm{~mm}, \mathrm{~d}=400 \mathrm{~mm}, A_{s}=1000 \mathrm{~mm}^{2}$ and $\mathrm{n}=8$ if the allowable stresses are $f_{c} \leq 12 \mathrm{Mpa}$. and $f_{s} \leq 140 \mathrm{Mpa}$. determine the maximum bending moment that may be applied ,is the beam over or under reinforced .

## Solution:

Computing the factors kd,jd
$250 *(\mathrm{kd})^{2} / 2=8000 *(400-\mathrm{kd})$
$(\mathrm{kd})^{2}+8000 \mathrm{kd}-3200000=0$
$(\mathrm{kd})^{2}+64 \mathrm{kd}-25600=0$
$(k d-131)(k d+195)=0$

$$
\mathrm{Kd}=131 \mathrm{~mm}
$$

$$
\mathrm{Jd}=400-(131 / 3)=356 \mathrm{~mm}
$$

$$
\begin{aligned}
\mathrm{M}_{c} & =1 / 2 * f_{c}(\mathrm{bkd})(\mathrm{jd}) \\
& =1 / 2 *\left(12 * 10^{6}\right)(0.25 * 0.131)(0.356)=70 \mathrm{KN} . \mathrm{m}
\end{aligned}
$$

$$
\mathrm{M}_{s}=f_{s} A_{s}(\mathrm{jd})
$$

$$
=140 * 10^{6} * 1000 * 10^{-6} * 0.356=49.8 \mathrm{KN} . \mathrm{m}
$$

Maximum bending moment=49.8 KN.m
The beam is under reinforced

$$
\begin{aligned}
& 60000 * \tilde{Y}=45000 * 160+15000 * 5 \\
& \tilde{\mathrm{Y}}=121 \mathrm{~mm} \\
& I_{N . A}=150 *(300)^{3} / 12+45000 *(39)^{2}+1500 *(10)^{3} / 12+15000 *(116)^{2} \\
& =611 * 10^{-6} \mathrm{~mm}^{4} \\
& \mathrm{M}=\sigma \mathrm{I} / \mathrm{Y} \\
& \mathrm{M}_{w}=8 * 10^{6 *} 611 * 10^{-6} / 189 * 10^{-3}=25.9 \mathrm{KN} . \mathrm{m}
\end{aligned}
$$

## 5/ Post test :-

1-A timber beam ( 175 mm ) by $(340 \mathrm{~mm})$ is reinforced on the bottom only with a steel strip $(80 \mathrm{~mm})$ wide by $(13 \mathrm{~mm})$ thick. Determine the maximum resisting moment if the allowable stresses are $\sigma_{s} \leq 130 \mathrm{Mpa}$. And $\sigma_{w} \leq 9 \mathrm{Mpa}$. Assume ( $\mathrm{n}=20$ ) .

1- Pre test: 1-As in text.
2- Post test :1-M=42.9KN.m.
